**MASTER OF COMPUTER APPLICATIONS**

Course Code	WEB TECHNOLOGIES		L	T	P	C
21F00301			4	0	0	4
Semester			III			
Course Objectives:						
<ul style="list-style-type: none"><li>To introduce PHP language for server-side scripting</li><li>To introduce XML and processing of XML Data with Java</li><li>To introduce Server-side programming with Java Servlets and JSP</li><li>To introduce Client-side scripting with Javascript and AJAX.</li></ul>						
Course Outcomes (CO): Student will be able to						
<ul style="list-style-type: none"><li>Gain knowledge of client-side scripting, validation of forms and AJAX programming</li><li>Understand server-side scripting with PHP language</li><li>Understand what is XML and how to parse and use XML Data with Java</li><li>To introduce Server-side programming with Java Servlets and JSP</li></ul>						
UNIT - I						Lecture Hrs:
Introduction to PHP: Declaring variables, data types, arrays, strings, operators, expressions, control structures, functions, Reading data from web form controls like text boxes, radio buttons, lists etc., Handling File Uploads. Connecting to database (MySQL as reference), executing simple queries, handling results, Handling sessions and cookies File Handling in PHP: File operations like opening, closing, reading, writing, appending, deleting etc. on text and binary files, listing directories						
UNIT - II						Lecture Hrs:
HTML Common tags- List, Tables, images, forms, Frames; Cascading Style sheets; XML: Introduction to XML, Defining XML tags, their attributes and values, Document Type Definition, XML Schemes, Document Object Model, XHTML Parsing XML Data – DOM and SAX Parsers in java.						
UNIT - III						Lecture Hrs:
Introduction to Servlets: Common Gateway Interface (CGI), Life cycle of a Servlet, deploying a servlet, The Servlet API, Reading Servlet parameters, Reading Initialization parameters, Handling Http Request & Responses, Using Cookies and Sessions, connecting to a database using JDBC.						
UNIT - IV						Lecture Hrs:
Introduction to JSP: The Anatomy of a JSP Page, JSP Processing, Declarations, Directives, Expressions, Code Snippets, implicit objects, Using Beans in JSP Pages, Using Cookies and session for session tracking, connecting to database in JSP.						
UNIT - V						
Client-side Scripting: Introduction to JavaScript, JavaScript language – declaring variables, scope of variables, functions. event handlers (on click, on submit etc.), Document Object Model, Form validation.						
Text Books:						
<ol style="list-style-type: none"><li>Web Technologies, Uttam K Roy, Oxford University Press</li><li>The Complete Reference PHP — Steven Holzner, Tata McGraw-Hil</li></ol>						

**R21 Regulations**

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY ANANTAPUR**  
**(Established by Govt. of A.P., ACT No.30 of 2008)**  
**ANANTHAPURAMU – 515 002 (A.P) INDIA**

**MASTER OF COMPUTER APPLICATIONS**

Course Code	BIG DATA TECHNOLOGIES	L	T	P	C
21F00302		4	0	0	4
Semester		III			
Course Objectives:					
<ul style="list-style-type: none"><li>To understand the specialized aspects of big data including big data application, and big data analytics.</li><li>To study different types Case studies on the current research and applications of the Hadoop and big data in industry.</li></ul>					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"><li>Discuss the challenges and their solutions in Big Data</li><li>Understand and work on Hadoop Framework and eco systems.</li><li>Explain and Analyze the Big Data using Map-reduce programming in Both Hadoop and Spark framework.</li><li>Demonstrate spark programming with different programming languages.</li><li>Demonstrate the graph algorithms and live streaming data in Spark</li></ul>					
UNIT – I					Lecture Hrs:
What is big data, why big data, convergence of key trends, unstructured data, industry examples of big data, web analytics, big data and marketing, fraud and big data, risk and big data, credit risk management, big data and algorithmic trading, big data and healthcare, big data in medicine, advertising and big data, big data technologies, introduction to Hadoop, open source technologies, cloud and big data, mobile business intelligence, Crowd sourcing analytics, inter and trans firewall analytics					
UNIT – II					Lecture Hrs:
Introduction to NoSQL, aggregate data models, aggregates, key-value and document data models, relationships, graph databases, schemaless databases, materialized views, distribution models, sharding, master-slave replication, peer-peer replication, sharding and replication, consistency, relaxing consistency, version stamps, map-reduce, partitioning and combining, composing mapreduce calculations					
UNIT – III					Lecture Hrs:
Data format, analysing data with Hadoop, scaling out, Hadoop streaming, Hadoop pipes, design of Hadoop distributed file system (HDFS), HDFS concepts, Java interface, data flow, Hadoop I/O, data integrity, compression, serialization, Avro, file-based data structures					
UNIT – IV					Lecture Hrs:
MapReduce workflows, unit tests with MRUnit, test data and local tests, anatomy of MapReduce job run, classic Map-reduce, YARN, failures in classic Map-reduce and YARN, job scheduling, shuffle and sort, task execution, MapReduce types, input formats, output formats.					
UNIT – V					
Hbase, data model and implementations, Hbase clients, Hbase examples, praxis. Cassandra, Cassandra data model, Cassandra examples, Cassandra clients, Hadoop integration, Hive, data types and file formats, HiveQL data definition, HiveQL data manipulation, HiveQL queries.					
Text Books:					
<ol style="list-style-type: none"><li>Big Data Analytics, Introduction to Hadoop, Spark, and Machine-Learning, Raj kamal, PreetiSaxena, McGraw Hill, 2018.</li><li>Big Data, Big Analytics: Emerging Business intelligence and Analytic trends for Today's Business, Michael Minelli, Michelle Chambers, and AmbigaDhiraj, John Wiley &amp; Sons, 2013</li></ol>					

*R21 Regulations*

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY ANANTAPUR**

**MASTER OF COMPUTER APPLICATIONS**

Course Code	DEVOPS & AGILE PROGRAMMING	L	T	P	C
21F00303		4	0	0	4
Semester		III			
Course Objectives:					
<ul style="list-style-type: none"><li>To give strong knowledge of Agile practices</li><li>To give strong foundation of applications of DevOps</li><li>To give strong foundation of development and its operations</li><li>To give strong foundation of the source code management</li></ul>					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"><li>Understand the traditional software development.</li><li>Learn the rise of agile methodologies.</li><li>Define and design purpose of DevOps</li><li>Understand applied DevOps.</li><li>Learn real world applications of DevOps.</li><li>Understand its practical examples.</li></ul>					
UNIT - I					Lecture Hrs:
Why Agile? , How to be Agile, Understanding XP, Values and Principles, Improve the Process, Eliminate Waste, Deliver Value. Practicing XP-Thinking, Pair Programming, Energized Work, Informative Workspace, Root-Cause Analysis, Retrospectives, Collaborating, Sit Together, Real Customer Involvement, Ubiquitous Language, Stand-Up Meetings, Coding Standards, Iteration Demo, Reporting.					
UNIT - II					Lecture Hrs:
Releasing-Done Done, No Bugs, Version Control, Ten-Minute Build, Continuous Integration, Collective Code Ownership, Documentation. Planning-Vision, Release Planning, Risk Management, Iteration Planning, Stories, Estimating.					
UNIT - III					Lecture Hrs:
Developing-Incremental Requirements, Customer Tests, Test- Driven Development, Refactoring, Incremental Design and Architecture, Spike Solutions, Performance Optimization.					
UNIT - IV					Lecture Hrs:
DEIFINITION & PURPOSE OF DEVOPS: Introduction to DevOps - DevOps and Agile, Minimum Viable Product - Application Deployment - Continuous Integration - Continuous Delivery					
UNIT - V					
CAMS (CULTURE, AUTOMATION, MEASUREMENT AND SHARING): CAMS – Culture - CAMS – Automation - CAMS – Measurement - CAMS – Sharing - Test-Driven Development - Configuration Management - Infrastructure Automation - Root Cause Analysis – Blamelessness - Organizational Learning.					
Text Books:					
<ol style="list-style-type: none"><li>James Shore and Shane Warden, “ The Art of Agile Development”, O'REILLY, 2007.</li><li>Robert C. Martin, “Agile Software Development, Principles, Patterns, and Practices” , PHI, 2002.</li><li>The DevOps Handbook - by Gene Kim, Jez Humble, Patrick Debois, and Willis Willis</li><li>What is DevOps? - by Mike Loukides</li><li>The DevOps Handbook - by John Willis, Patrick Debois, Jez Humble, Gene Kim.</li><li>DevOps: A Software Architect’s Perspective - by Len Bass, Ingo Weber, Liming Zhu.</li></ol>

**MASTER OF COMPUTER APPLICATIONS**

Course Code	SOFTWARE ARCHITECTURE AND DESIGN PATTERNS	L	T	P	C
21F00304a		3	0	0	3
Semester		III			
Course Objectives:					
<ul style="list-style-type: none"><li>Learn How to add functionality to designs while minimizing complexity.</li><li>What code qualities are required to maintain to keep code flexible?</li><li>To Understand the common design patterns.</li><li>To explore the appropriate patterns for design problems</li></ul>					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"><li>Design and implement codes with higher performance and lower complexity</li><li>Experience core design principles and be able to assess the quality of a design with respect to these principles.</li><li>Capable of applying these principles in the design of object oriented systems.</li><li>Demonstrate an understanding of a range of design patterns. Be capable ofcomprehending a design presented using this vocabulary.</li><li>Be able to select and apply suitable patterns in specific contexts</li></ul>					
UNIT – I		Lecture Hrs:			
Envisioning Architecture The Architecture Business Cycle, What is Software Architecture, Architectural patterns, reference models, reference architectures, architectural structures and views. Creating an Architecture Quality Attributes, Achieving qualities, Architectural styles and patterns, designing the Architecture, Documenting software architectures, Reconstructing Software Architecture.					
UNIT – II		Lecture Hrs:			
Analyzing Architectures Architecture Evaluation, Architecture design decision making, ATAM, CBAM Moving from One System to Many Software Product Lines, Building systems from off the shelf components, Software architecture in future					
UNIT – III		Lecture Hrs:			
Patterns Pattern Description, Organizing catalogs, role in solving design problems, Selection and usage. Creational and Structural Patterns Abstract factory, builder, factory method, prototype, singleton, adapter, bridge, composite, façade, flyweight.					
UNIT – IV		Lecture Hrs:			
Behavioral Patterns Chain of responsibility, command, Interpreter, iterator, mediator, memento, observer, state, strategy, template method, visitor.					
UNIT – V					
Case Studies A-7E – A case study in utilizing architectural structures, The World Wide Web - a case study in interoperability, Air Traffic Control – a case study in designing for high availability, Celsius Tech – a case study in product line development. A Case Study (Designing a Document Editor): Design Problems, Document Structure, Formatting, Embellishing the User Interface, Supporting Multiple Look-and-Feel Standards, Supporting Multiple Window Systems, User Operations, Spelling Checking and Hyphenation.					
TEXT BOOKS:					
1. Software Architecture in Practice, second edition, Len Bass, Paul Clements & Rick Kazman, Pearson Education, 2003. 2. Design Patterns, Erich Gamma, Pearson Education, 1995.					
REFERENCE BOOKS:					
1. Beyond Software architecture, Luke Hohmann, Addison wesley, 2003. 2. Software architecture, David M. Dikel, David Kane and James R. Wilson, Prentice Hall PTR, 2001 3.

**MASTER OF COMPUTER APPLICATIONS**

Course Code	NETWORK SECURITY	L	T	P	C
21F00304b		3	0	0	3
Semester		III			
Course Objectives:					
<ul style="list-style-type: none"><li>Network security using various cryptographic algorithms.</li><li>Underlying network security applications. It also focuses on the practical applications that have been implemented and are in use to provide email and websecurity.</li></ul>					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"><li>Understand the most common type of cryptographic algorithm</li><li>Understand the Public-Key Infrastructure</li><li>Understand security protocols for protecting data on networks</li><li>Be able to digitally sign emails and files</li><li>Understand vulnerability assessments and the weakness of using passwords for authentication</li><li>Be able to perform simple vulnerability assessments and password audits</li></ul>					
UNIT - I		Lecture Hrs:			
Attacks, Services and Mechanisms, Security Attacks, Security Services, Integrity check, digital Signature, authentication, has algorithms.					
UNIT - II		Lecture Hrs:			
Block Encryption, DES rounds, S-Boxes IDEA: Overview, comparison with DES, Key expansion, IDEA rounds, Uses of Secret key Cryptography; ECB, CBC, OFB, CFB, Multiple encryptions DES					
UNIT - III		Lecture Hrs:			
Length of hash, uses, algorithms (MD2, MD4, MD5, SHS) MD2: Algorithm (Padding, checksum, passes.) MD4 and 5: algorithm (padding, stages, digest computation.) SHS: Overview, padding, stages. Algorithms, examples, Modular arithmetic (addition, multiplication, inverse, and exponentiation) RSA: generating keys, encryption and decryption. Other Algorithms: PKCS, Diffie-Hellman, El-Gamal signatures, DSS, Zero-knowledge signatures.					
UNIT - IV		Lecture Hrs:			
Password Based, Address Based, Cryptographic Authentication. Passwords in distributed systems, on-line vs offline guessing, storing. Cryptographic Authentication: passwords as keys, protocols, KDC's Certification Revocation, Interdomain, groups, delegation. Authentication of People: Verification techniques, passwords, length of passwords, password distribution, smart cards, biometrics.					
UNIT - V					
What is security policy, high and low level policy, user issues? Protocol problems, assumptions, Shared secret protocols, public key protocols, mutual authentication, reflection attacks, use of timestamps, nonce and sequence numbers, session keys, one-and two-way public key based authentication.					
Text Books:					
<ol style="list-style-type: none"><li>AtulKahate, Cryptography and Network Security, McGraw Hill.</li><li>Kaufman, c., Perlman, R., and Speciner, M., Network Security, Private Communication in a public world, 2nd ed., Prentice HallPTR., 2002.</li><li>Stallings W.Cryptography and Network Security: Principles and Practice, 3rd ed., Prentice Hall PTR.,2003</li><li>Stallings, W. Network security Essentials: Applications and standards, Prentice Hall, 2000.</li><li>Cryptography and Network Security; McGraw Hill; Behrouz A Forouzan.</li><li>Information Security Intelligence Cryptographic Principles and App. CalabresThomson.</li><li>Securing A Wireless Network Chris Hurley SPD.</li></ol>

**MASTER OF COMPUTER APPLICATIONS**

Course Code	MACHINE LEARNING	L	T	P	C
21F00304c		3	0	0	3
Semester		III			
<b>Course Objectives:</b>					
<ul style="list-style-type: none"><li>This course explains machine learning techniques such as decision tree learning, Bayesian learning etc.</li><li>To understand computational learning theory.</li><li>To study the pattern comparison techniques.</li></ul>					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"><li>Understand the concepts of computational intelligence like machine learning</li><li>Ability to get the skill to apply machine learning techniques to address the real time problems in different areas</li><li>Understand the Neural Networks and its usage in machine learning application.</li></ul>					
<b>UNIT - I</b>					Lecture Hrs:
.Introduction - Well-posed learning problems, designing a learning system, Perspectives and issues in machine learning Concept learning and the general to specific ordering – introduction, a concept learning task, concept learning as search, find-S: finding a maximally specific hypothesis, version spaces and the candidate elimination algorithm, remarks on version spaces and candidate elimination, inductive bias. Decision Tree Learning – Introduction, decision tree representation, appropriate problems for decision tree learning, the basic decision tree learning algorithm, hypothesis space search in decision tree learning, inductive bias in decision tree learning, issues in decision tree learning					
<b>UNIT - II</b>					Lecture Hrs:
Artificial Neural Networks-1– Introduction, neural network representation, appropriate problems for neural network learning, perceptions, multilayer networks and the back-propagation algorithm. Artificial Neural Networks-2- Remarks on the Back-Propagation algorithm, An illustrative example: face recognition, advanced topics in artificial neural networks. Evaluation Hypotheses – Motivation, estimation hypothesis accuracy, basics of sampling theory, a general approach for deriving confidence intervals, difference in error of two hypotheses, comparing learning algorithms.					
<b>UNIT - III</b>					Lecture Hrs:
Bayesian learning – Introduction, Bayes theorem, Bayes theorem and concept learning, Maximum Likelihood and least squared error hypotheses, maximum likelihood hypotheses for predicting probabilities, minimum description length principle, Bayes optimal classifier, Gibbs algorithm, Naïve Bayes classifier, an example: learning to classify text, Bayesian belief networks, the EM algorithm. Computational learning theory – Introduction, probably learning an approximately correct hypothesis, sample complexity for finite hypothesis space, sample complexity for infinite hypothesis spaces, the mistake bound model of learning. Instance-Based Learning- Introduction, k-nearest neighbour algorithm, locally weighted regression, radial basis functions, case-based reasoning, remarks on lazy and eager learning					
<b>UNIT - IV</b>					Lecture Hrs:
Genetic Algorithms – Motivation, Genetic algorithms, an illustrative example, hypothesis space search, genetic programming, models of evolution and learning, parallelizing genetic algorithms. Learning Sets of Rules – Introduction, sequential covering algorithms, learning rule sets: summary, learning First-Order rules, learning sets of First-Order rules: FOIL, Induction as inverted deduction, inverting resolution. Reinforcement Learning – Introduction, the learning task, Q-learning, non-deterministic, rewards and actions, temporal difference learning, generalizing from examples, relationship to dynamic programming.

**ANANTHAPURAMU – 515 002 (A.P) INDIA**

**MASTER OF COMPUTER APPLICATIONS**

<b>UNIT - V</b>	
Analytical Learning-1- Introduction, learning with perfect domain theories: PROLOG-EBG, remarks on explanation-based learning, explanation-based learning of search control knowledge. Analytical Learning-2-Using prior knowledge to alter the search objective, using prior knowledge to augment search operators. Combining Inductive and Analytical Learning – Motivation, inductive-analytical approaches to learning, using prior knowledge to initialize the hypothesis	
<b>Text Books:</b>	
1.Machine Learning – Tom M. Mitchell, - MGH

**MASTER OF COMPUTER APPLICATIONS**

Course Code	MOBILE APPLICATION DEVELOPMENT	L	T	P	C
21F00305a		3	0	0	3
Semester		III			
Course Objectives:					
<ul style="list-style-type: none"><li>To demonstrate their understanding of the fundamentals of Android operating systems</li><li>To improves their skills of using Android software development tools</li><li>To demonstrate their ability to develop software with reasonable complexity on mobile platform</li><li>To demonstrate their ability to deploy software to mobile devices</li><li>To demonstrate their ability to debug programs running on mobile devices</li></ul>					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"><li>Student understands the working of Android OS Practically.</li><li>Student will be able to develop Android user interfaces</li><li>Student will be able to develop, deploy and maintain the Android Applications.</li></ul>					
UNIT – I	Lecture Hrs:				
Introduction to Android Operating System: Android OS design and Features – Android development framework, SDK features, Installing and running applications on Android Studio, Creating AVDs, Types of Android applications, Best practices in Android programming, Android tools Android application components – Android Manifest file, Externalizing resources like values, themes, layouts, Menus etc, Resources for different devices and languages, Runtime Configuration Changes Android Application Lifecycle – Activities, Activity lifecycle, activity states, monitoring state changes.					
UNIT – II	Lecture Hrs:				
Android User Interface: Measurements – Device and pixel density independent measuring UNIT - s Layouts – Linear, Relative, Grid and Table Layouts User Interface (UI) Components – Editable and non-editable Text Views, Buttons, Radio and Toggle Buttons, Checkboxes, Spinners, Dialog and pickers Event Handling – Handling clicks or changes of various UI components Fragments – Creating fragments, Lifecycle of fragments, Fragment states, Adding fragments to Activity, adding, removing and replacing fragments with fragment transactions, interfacing between fragments and Activities, Multi-screen Activities					
UNIT – III	Lecture Hrs:				
Intents and Broadcasts: Intent – Using intents to launch Activities, Explicitly starting new Activity, Implicit Intents, Passing data to Intents, Getting results from Activities, Native Actions, using Intent to dial a number or to send SMS Broadcast Receivers – Using Intent filters to service implicit Intents, Resolving Intent filters, finding and using Intents received within an Activity Notifications – Creating and Displaying notifications, Displaying Toasts					
UNIT – IV	Lecture Hrs:				
Persistent Storage: Files – Using application specific folders and files, creating files, reading data from files, listing contents of a directory Shared Preferences – Creating shared preferences, saving andretrieving data using Shared Preference					
UNIT – V					
Database – Introduction to SQLite database, creating and opening a database, creating tables, inserting retrieving and etindelg data, Registering Content Providers, Using content Providers (insert, delete, retrieve and update)					
Text Books:					
<ol style="list-style-type: none"><li>Professional Android 4 Application Development, Reto Meier, Wiley India, (Wrox)2012</li><li>Android Application Development for Java Programmers, James C Sheusi, Cengage Learning, 2013</li></ol>					

*R21 Regulations*

**MASTER OF COMPUTER APPLICATIONS**

Course Code	INTERNET OF THINGS		L	T	P	C
21F00305b			3	0	0	3
Semester			III			
<b>Course Objectives:</b>						
<ul style="list-style-type: none"><li>• Introduce the fundamental concepts of IoT and physical computing</li><li>• Expose the student to a variety of embedded boards and IoT Platforms</li><li>• Create a basic understanding of the communication protocols in IoT communications.</li><li>• Familiarize the student with application program interfaces for IoT.</li><li>• Enable students to create simple IoT applications.</li></ul>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ul style="list-style-type: none"><li>• Choose the sensors and actuators for an IoT application</li><li>• Select protocols for a specific IoT application</li><li>• Utilize the cloud platform and APIs for IoT applications</li><li>• Experiment with embedded boards for creating IoT prototypes</li><li>• Design a solution for a given IoT application</li><li>• Establish a startup</li></ul>						
<b>UNIT – I</b>			Lecture Hrs:			
<p>.Overview of IoT: The Internet of Things: An Overview, The Flavor of the Internet of Things, The “Internet” of “Things”, The Technology of the Internet of Things, Enchanted Objects, Who is Making the Internet of Things? Design Principles for Connected Devices: Calm and Ambient Technology, Privacy, Web Thinking for Connected Devices, Affordances. Prototyping: Sketching, Familiarity, Costs Vs Ease of Prototyping, Prototypes and Production, Open source Vs Close source, Tapping into the community.</p>						
<b>UNIT – II</b>			Lecture Hrs:			
<p>Embedded Devices: Electronics, Embedded Computing Basics, Arduino, Raspberry Pi, Mobile phones and tablets, Plug Computing: Always-on Internet of Things</p>						
<b>UNIT – III</b>			Lecture Hrs:			
<p>Communication in the IoT: Internet Communications: An Overview, IP Addresses, MAC Addresses, TCP and UDP Ports, Application Layer Protocols Prototyping Online Components: Getting Started with an API, Writing a New API, Real-Time Reactions, Other Protocols Protocol</p>						
<b>UNIT – IV</b>			Lecture Hrs:			
<p>Business Models: A short history of business models, The business model canvas, Who is the business model for, Models, Funding an Internet of Things startup, Lean Startups. Manufacturing: What are you producing, Designing kits, Designing printed circuit boards.</p>						
<b>UNIT – V</b>						
<p>Manufacturing continued: Manufacturing printed circuit boards, Mass-producing the case and other fixtures, Certification, Costs, Scaling up software. Ethics: Characterizing the Internet of Things, Privacy, Control, Environment, Solutions.</p>						
<b>Text Books:</b>						
Adrian McEwen, Hakim Cassimally - Designing the Internet of Things, Wiley Publications, 2012

**MASTER OF COMPUTER APPLICATIONS**

Course Code	BLOCK CHAIN TECHNOLOGIES	L	T	P	C
21F00305c		3	0	0	3
Semester		III			
Course Objectives:					
<ul style="list-style-type: none"><li>This course is intended to study the basics of Block chain technology. During this course learner will explore various aspects of Block chain technology like application in various domains. By implementing learner will have idea about private and public Block chain, and smart contract</li></ul>					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"><li>Understand and explore the working of Block chain technology (Understanding)</li><li>Analyze the working of Smart Contracts (Analyze)</li><li>Understand and analyze the working of Hyper ledger (Analyze).</li><li>Apply the learning of solidity and de-centralized apps on Ethereum (Apply).</li></ul>					
UNIT - I					Lecture Hrs:
Introduction of Cryptography and Block chain: What is Block chain, Block chain Technology Mechanisms & Networks, Block chain Origins, Objective of Block chain, Block chain Challenges, Transactions And Blocks, P2P Systems, Keys As Identity, Digital Signatures, Hashing, and public key cryptosystems, private vs. public Block chain					
UNIT - II					Lecture Hrs:
Bit Coin and Crypto currency: What is Bitcoin, The Bitcoin Network, The Bitcoin Mining Process, Mining Developments, Bitcoin Wallets, Decentralization and Hard Forks, Ethereum Virtual Machine (EVM), Merkle Tree, Double-Spend Problem, Blockchain And Digital Currency, Transactional Blocks, Impact Of Block chain Technology On Crypto currency.					
UNIT - III					Lecture Hrs:
Introduction to Ethereum: What is Ethereum, Introduction to Ethereum, Consensus Mechanisms, How Smart Contracts Work, Metamask Setup, Ethereum Accounts, Receiving Ether's What's a Transaction?, Smart Contracts.					
UNIT - IV					Lecture Hrs:
Introduction to Hyper ledger: What is Hyper ledger? Distributed Ledger Technology & its Challenges, Hyper ledger & Distributed Ledger Technology, Hyper ledger Fabric, Hyper ledger Composer.					
UNIT - V					
Block chain Applications: Internet of Things, Medical Record Management System, Domain Name Service and Future of Block chain, Alt Coins					
Text Books:

**MASTER OF COMPUTER APPLICATIONS**

Course Code	WEB TECHNOLOGIES LABORATORY	L	T	P	C
21F00306		0	0	4	2
Semester		III			
<b>Course Objectives:</b>					
<ul style="list-style-type: none"><li>Understand the web technologies to create adaptive web pages for web application.</li><li>Use CSS to implement a variety of presentation effects to the web application</li><li>Know the concept and implementation of cookies as well as related privacy concerns</li><li>Develop a sophisticated web application that employs the MVC architecture.</li></ul>					
<b>Course Outcomes (CO):</b>					
<ul style="list-style-type: none"><li>Integrate frontend and backend web technologies in distributed systems.</li><li>Facilitate interface between frontend and backend of a web application.</li><li>Debug, test and deploy web applications in different web servers.</li><li>Migrate the web applications to the other platforms like .Net</li></ul>					
<b>List of Experiments:</b>					
<ol style="list-style-type: none"><li>Write a PHP script to print prime numbers between 1 -50.</li><li>PHP script to<ol style="list-style-type: none"><li>Find the length of a string.</li><li>Count no of words in a string.</li><li>Reverse a string.</li><li>Search for a specific string.</li></ol></li><li>Write a PHP script to merge two arrays and sort them as numbers, in descending order.</li><li>Write a PHP script that reads data from one file and write into another file.</li><li>Develop static pages (using Only HTML) of an online book store. The pages should resemble: www.amazon.com. The website should consist the following pages:<ol style="list-style-type: none"><li>Home page</li><li>Registration and user Login</li><li>User Profile Page</li><li>Books catalog</li><li>Shopping Cart</li><li>Payment By credit card</li><li>Order Conformation</li></ol></li><li>Validate the Registration, user login, user profile and payment by credit card pages using JavaScript.</li><li>Create and save an XML document on the server, which contains 10 users information. Write a program, which takes User Id as an input and returns the user details by taking the user information from the XML document.</li><li>Install TOMCAT web server. Convert the static web pages of assignments 2 into dynamic web pages using servlets and cookies. Hint: Users information (user id, password, credit card number) would be stored in web.xml. Each user should have a separate Shopping Cart.</li><li>Redo the previous task using JSP by converting the static web pages of assignments 2 into dynamic web pages. Create a database with user information and books information. The books catalogue should be dynamically loaded from the database. Follow the MVC architecture while doing the website</li></ol>

**MASTER OF COMPUTER APPLICATIONS**

Course Code	BIG DATA TECHNOLOGIES LABORATORY	L	T	P	C
21F00307		0	1	2	2
Semester		III			
Course Objectives:					
<ul style="list-style-type: none"><li>• Apply quantitative modeling and data analysis techniques to the solution of real-world business problems, communicate findings, and effectively present results using data visualization techniques.</li><li>• Apply principles of Data Science to the analysis of business problems.</li></ul>					
Course Outcomes (CO):					
<ul style="list-style-type: none"><li>• Understand and implement the basics of data structures like Linked list, stack, queue, set and map in Java.</li><li>• Demonstrate the knowledge of big data analytics and implement different file management task in Hadoop.</li><li>• Understand Map Reduce Paradigm and develop data applications using variety of systems.</li><li>• Analyze and perform different operations on data using Pig Latin scripts.</li><li>• Illustrate and apply different operations on relations and databases using Hive.</li></ul>					
List of Experiments:					
<b>Week 1:</b> Hadoop Installation on a)Single Node and SPARK Installation, Launch a cloud instance for AWS instance on Centos 7					
<b>Week 2:</b> Design a distributed application using MapReduce which processes a log file of a system. List out the users who have logged for maximum period on the system. Use simple log file from the Internet and process it using a pseudo distribution mode on Hadoop platform.					
<b>Week 3:</b> Design and develop a distributed application to find the coolest/hottest year from the available weather data. Use weather data from the Internet and process it using MapReduce.					
<b>Week 4:</b> Write an application using HBase and HiveQL for flight information system which will include 1) Creating, Dropping, and altering Database tables, 2) Creating an external Hive table to connect to the HBase for Customer Information Table, 3) Load table with data, insert new values and field in the table, Join tables with Hive, 4) Create index on Flight information Table, and 5) Find the average departure delay per day in 2008.					
<b>Week 5:</b> Display the hierarchical structure of your data by generating Trees, graphs and network visualization. Install and Run Pig then write Pig Latin scripts to sort, group, join, project and filter the data. Install and Run Hive then use Hive to Create, alter and drop databases, tables, views, functions and Indexes.					
<b>Week 6:</b> Input file contains a series of tweets made by few people. Do a word count on the text object value Hint: Json Parsing in python – this sample snippet can be used within Map to read the JSON					
<b>Week 7:</b> Reading different types of data sets (.txt, .csv) from web and disk and writing in file in specific disk location. And Reading Excel,XML data sheets in R. Using with and without R objects on console, mathematical functions on console create R objects for calculator application and save in a specified location in disk. Write an R script to find basic descriptive statistics using summary,str, quartile unction on mtcars& cars datasets and to find subset of dataset by using subset (),aggregate () functions on dataset.					
<b>Week 8:</b> Implementing data visualization using R : Find the data distributions using box and scatter plot, Find the outliers using plot and Plot the histogram, bar chart and pie chart on sample data.

Course Code	DEV OPS & AGILE PROGRAMMING LABORATORY	L	T	P	C
21F00308		0	0	4	2
Semester		III			
<b>Course Objectives:</b>					
To understand the concept of DevOps with associated technologies and <ul style="list-style-type: none"><li>methodologies.</li><li>To be familiarized with Jenkins, which is used to build &amp; test software Applications &amp; Continuous integration in Devops environment. To understand different Version Control tools like GIT, CVS or Mercurial</li><li>To understand Docker to build, ship and run containerized images</li><li>To use Docker to deploy and manage Software applications running on Container.</li><li>To be familiarized with concept of Software Configuration Management &amp; provisioning using tool like Puppet, Chef, Ansible or Saltstack.</li></ul>					
<b>Course Outcomes (CO):</b>					
<ul style="list-style-type: none"><li>Understand and Implement the Integration and Continuous deployment.</li><li>Can implement anatomy of continuous delivery pipeline.</li><li>Understands and implement static code analysis.</li></ul>					
<b>List of Experiments:</b>					
Agile Laboratory Programs:					
<ol style="list-style-type: none"><li>Understand the background and driving forces fortaking an Agile Approach to Software Development.</li><li>Understand the business value of adopting agile approach.</li><li>Understand agile development practices</li><li>Drive Development with Unit Test using Test Driven development.</li><li>Apply Design principle and Refactoring to achieve agility</li><li>To study automated build tool.</li><li>To study version control tool.</li><li>To study Continuous Integration tool.</li><li>Perform Testing activities within an agile project.</li></ol>					
Dev Ops Laboratory Programs:					
<ol style="list-style-type: none"><li>Build &amp; Test Applications with Continuous Integration - To Install and Configure Jenkins to test, and deploy Java or Web Applications using NetBeans or eclipse.</li><li>Version Control - To Perform Version Control on websites/Software's using different Version control tools like RCS/ CVS/GIT/Mercurial (Any two)</li><li>Virtualization &amp; Containerization - To Install and Configure Docker for creating Containers of different Operating System Images</li><li>Virtualization &amp; Containerization - To Build, deploy and manage web or Java application on Docker</li><li>Software Configuration Management - To install and configure Software Configuration Management using Chef/Puppet/Ansible or Saltstack.</li><li>Provisioning - To Perform Software Configuration Management and provisioning using Chef/Puppet/Ansible or Saltstack.</li></ol>

Course Code	MEAN STACK DEVELOPMENT	L	T	P	C
21F00310		1	0	2	2
	Semester	III			
<b>Course Objectives:</b>					
<ul style="list-style-type: none"><li>To understand basic concepts of JAVASCRIPT.</li><li>To implement concepts of HTML,CSS, and REACT in developing various websites.</li><li>To design solutions to real world scenarios using NODE and EXPRESS JS.</li><li>To Analyze concepts of MONGODB.</li><li>To implement socket programming in MERN stack.</li></ul>					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"><li>Understand basic concepts of JAVASCRIPT.</li><li>Implement concepts of HTML,CSS, and REACT in developing various websites.</li><li>Design solutions to real world scenarios using NODE and EXPRESS JS.</li><li>Analyze concepts of MONGODB.</li><li>Implement socket programming in MERN stack.</li></ul>					
<b>UNIT – I</b>	Lecture Hrs:10				
Introduction: data types ,logical operations, functions, object and classes, promise async& await, modules and npm packages, error handling, Document Object module, J Query.					
<b>UNIT – II</b>	Lecture Hrs:10				
<b>HTML CSS and REACT :</b> Basic structure of a webpage, Different types of tags , HTML text fundamentals, Creating hyperlinks, Insertion of images and multimedia, Introduction CSS, CSS-selector –internal- external , CSS- inline class background font text colour, CSS-padding margin border, Installation of react , REACT- virtual DOM, REACT-JSX, REACT-components, REACT-prop and state , REACT – lifecycles.					
<b>UNIT – III</b>	Lecture Hrs:10				
<b>Node and Express JS :</b> Introduction of Node JS (Run time environment), Node JS installation, Node JS web based example (import required modules ,create server,read request and return response), Node JS – npm ,errors, crypto, Node JS – child process ,buffer, string, Node JS- string decoder ,query string , Node JS- callbacks , events, web modules, Introduction of APIs, Express JS – introduction , Express JS- installation, Express JS – GET, POST, REQUEST, RESPONSE, Express JS- Routing ,file upload, cookies, middleware .					
<b>UNIT – IV</b>	Lecture Hrs:10				
<b>MongoDB:</b> Introduction of MongoDB, Difference between SQL and NoSQL, MongoDB data types, MongoDB installation, Data modelling in MongoDB, Create database, Drop Database, Create collection, Insert document, Select document, Queries in MongoDB, Sorting data in document, Remove document.					
<b>UNIT - V</b>	Lecture Hrs:10				
<b>Socket programming in MERN stack :</b> Connect the react to node by axiom, Import required module, Create server in node, Connect the Node JS to MongoDB, Create request , Read Response, Full Stack Project.					
<b>Textbooks:</b>					
<ol style="list-style-type: none"><li>Getting MEAN with MONGO, Express angular and node by Simon Holmes, Dreamtech Publishers</li><li>Pro MERN Stack: Full Stack Web App Development with Mongo, Express, React, and Node Paperback – 1 April 2017 by Vasanth Subramanian (Author)</li><li>Beginning MERN Stack: Build and Deploy a Full Stack MongoDB, Express, React, Node.js App by Greg Lim (Author)</li></ol>

Course Code	DEEP LEARNING	L	T	P	C
21F00401a		3	0	0	3
Semester		IV			
Course Objectives:					
<ul style="list-style-type: none"><li>To present the mathematical, statistical and computational challenges of building neural networks.</li><li>To teach the concepts of deep learning.</li><li>To introduce dimensionality reduction techniques.</li><li>To enable the students to know deep learning techniques to support real-time applications.</li><li>To explain the case studies of deep learning techniques.</li></ul>					
Course Outcomes (CO): Student will be able to					
<ul style="list-style-type: none"><li>Identify Convolutional Neural Networks models to solve Supervised Learning Problems</li><li>Design Autoencoders to solve Unsupervised Learning problems</li><li>Apply Long Shot Term Memory (LSTM) Networks for time series analysis classification problems.</li><li>Apply Classical Supervised Tasks for Image Denoising, Segmentation and Object detection problems.</li></ul>					
UNIT - I	Lecture Hrs:				
Introduction: Introduction to machine learning- Linear models (SVMs and Perceptron, logistic regression)- Intro to Neural Nets: What a shallow network computes- Training a network: loss functions, back propagation and stochastic gradient descent- Neural networks as universal function approximates.					
UNIT - II	Lecture Hrs:				
Deep Networks: History of Deep Learning- A Probabilistic Theory of Deep Learning- Back propagation and regularization, batch normalization- VC Dimension and Neural Nets-Deep Vs Shallow Networks Convolutional Networks - Generative Adversarial Networks (GAN), Semi- supervised Learning .					
UNIT - III	Lecture Hrs:				
Dimensionality Reduction: Linear (PCA, LDA) and manifolds, metric learning - Auto encoders and dimensionality reduction in networks - Introduction to Convnet - Architectures – AlexNet, VGG, Inception, ResNet - Training a Convnet: weights initialization, batch normalization, hyper parameter optimization.					
UNIT - IV	Lecture Hrs:				
Optimization and Generalization: Optimization in deep learning– Non-convex optimization for deep networks- Stochastic Optimization Generalization in neural networks- Spatial Transformer Networks- Recurrent networks, LSTM - Recurrent Neural Network Language Models- Word-Level RNNs & Deep Reinforcement Learning - Computational & Artificial Neuroscience.					
UNIT - V	Lecture Hrs:				
Case Study and Applications: Image net- Detection-Audio Wave Net-Natural Language Processing Word2Vec - Joint Detection Bioinformatics- Face Recognition- Scene Understanding- Gathering Image Captions.					
Text Books:					
<ol style="list-style-type: none"><li>Deep Learning”, Ian Goodfellow, YoshuaBengio , Aaron Courville, MIT Press 2016.</li><li>“Neural Networks and Deep Learning A Text Book”, Charu C Aggarwal, Springer International Publishing AG, Part of Springer Nature 2018.</li></ol>

**MASTER OF COMPUTER APPLICATIONS**

Course Code	SOCIAL MEDIA ANALYSIS		L	T	P	C
21F00401b			3	0	0	3
			Semester			
			IV			
<b>Course Objectives:</b>						
<ul style="list-style-type: none"><li>To inspire the students with interest, excitement, and urge to learn the subject of Social network analysis .</li><li>To understand the fundamental concepts of Social network analysis .</li><li>To introduce the purpose of learning important aspects in Social network analysis .</li></ul>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ul style="list-style-type: none"><li>explain basic concepts and theories of network analysis in the social sciences, and understand how these concepts and theories can help explain different actors’ micro behaviours as well as macro outcomes;</li><li>critically examine the ways in which networks can contribute to the explanation of social, political, economic and cultural phenomena;</li><li>use statistical software to visualize networks and analyse their properties, connecting these to network concepts and theories;</li><li>explain principles underlying statistical models for social networks;</li><li>use software to implement statistical models of social networks to analyse network formation and evolution;</li><li>use software to simulate the dynamics of networks based on social network models.</li></ul>						
UNIT - I					Lecture Hrs:10	
Introduction to Web - Limitations of current Web – Development of Semantic Web – Emergence of the Social Web - Network analysis -Development of Social Network Analysis - Key concepts and measures in network analysis - Electronic sources for network analysis -Electronic discussion networks, Blogs and online communities, Web-based networks - Applications of Social Network Analysis						
UNIT - II					Lecture Hrs:10	
Ontology and their role in the Semantic Web - Ontology-based Knowledge Representation - Ontology languages for the Semantic Web -RDF and OWL - Modelling and aggregating social network data – State-of-the-art in network data representation, Ontological representation of social individuals - Ontological representation of social relationships, Aggregating and reasoning with social network data, Advanced Representations						
UNIT - III					Lecture Hrs:10	
Extracting evolution of Web Community from a Series of Web Archive - Detecting Communities in Social Networks - Definition of Community - Evaluating Communities –Methods for Community Detection & Mining -Applications of Community Mining Algorithms- Tools for Detecting Communities Social Network Infrastructures and Communities-Applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions						
UNIT - IV					Lecture Hrs:9	
Understanding and Predicting Human Behavior for Social Communities - User Data Management, Inference and Distribution- Enabling New Human Experiences - Reality Mining - Context-Awareness - Privacy in Online Social Networks						
UNIT - V					Lecture Hrs:9	
Trust in Online Environment - Trust Models Based on Subjective Logic - Trust Network Analysis - Trust Transitivity Analysis -Combining Trust and Reputation - Trust Derivation Based on Trust Comparisons - Attack Spectrum and Countermeasures

Course Code	MULTIMEDIA SYSTEMS & TOOLS		L	T	P	C
21F00401c			3	0	0	3
Semester			IV			
Course Objectives:						
<ul style="list-style-type: none"><li>Formulate a working definition of interactive multimedia</li><li>Demonstrate competence in using the authoring program Hyper Studio</li><li>Outline the use of animation, digitized sound, video control, and scanned images</li><li>Illustrate the use of Netscape to access the Course Home Page and Tips and Tricks;</li></ul>						
Course Outcomes (CO): Student will be able to						
<ul style="list-style-type: none"><li>Create a well-designed, interactive Web site with respect to current standards and practices</li><li>Demonstrate in-depth knowledge in an industry-standard multimedia development tool and its associated scripting language</li><li>Determine the appropriate use of interactive verses standalone Web applications</li><li>Create time-based and interactive multimedia components</li><li>Identify issues and obstacles encountered by Web authors in deploying Web-based Applications</li></ul>						
UNIT – I					Lecture Hrs:	
Unit-I: Multimedia Overview, Definition Applications and Design, Authoring (HyperStudio), Introduction to HyperStudio, The Metaphor, The Basics (Cards, Buttons, Text), HyperStudio, Resources. Multimedia Authoring- Multimedia Authoring Metaphors, Multimedia Production, Multimedia Presentation, Automatic Authoring, Some Useful Editing and Authoring Tools, Adobe Premiere, Macromedia Director, Macromedia Flash, Dreamweaver.						
UNIT – II					Lecture Hrs:	
Unit-II: Instructional Design, Objectives, Content (print, graphics, sounds, etc.), Interaction, Assessment, Closure, Screen Design: Metaphors and Themes, Colors and Backgrounds, Text (size, color, placement), Navigation, Consistency.						
UNIT – III					Lecture Hrs:	
Unit-III: Transitions and Links, Use of Sound, HyperStudio Sounds, Recording Your Own, Internet Resources, Graphics, Integrating Web documents, HyperStudio Tips and Tricks, Animation, Launching other applications and documents						
UNIT – IV					Lecture Hrs:	
Unit-IV: Multimedia Portfolios, Designing a template, Adding elements, Choosing materials, Advanced Button Features, Hyperlinks, Drag-n-Drop, Advanced NBA's, Using Actions with other Objects.						
UNIT – V						
Incorporating Digital Media, QuickTime Movies, Laserdisc and CD-ROM control, scanning.						
Text Books:						
<ul style="list-style-type: none"><li>Marcia Kuperberg, A Guide to Computer Animation: for TV, games, multimedia and web, Focal Press (Taylor and Francis Group), 2002.</li><li>Z. N. Li and M. S. Drew, “Fundamentals of Multimedia”, Pearson Prentice Hall</li></ul>

Course Code	CYBER LAWS		L	T	P	C
21F00402a			3	0	0	3
Semester			IV			
Course Objectives:						
<ul style="list-style-type: none"><li>The objectives of this course are to enable the learner to understand, explore, and acquire a critical understanding of cyber laws.</li><li>Equip the learner with competencies for dealing with frauds and deceptions, and other cybercrimes that take place via the Internet</li></ul>						
Course Outcomes:						
<ul style="list-style-type: none"><li>Understand the social and intellectual property issues emerging from cyberspace.</li><li>Understand the policy regulations of cyber space employed by various countries</li><li>Understand the relationship between commerce and cyberspace.</li><li>Gain the knowledge of Information Technology Act</li></ul>						
UNIT - I						
Conceptual and theoretical perspective of Cyber Law, Computer and Web Technology, Development of Cyber Law, National and International Perspective Cyber Law, Legal issues and challenges in India, USA, Data Protection, Cyber Security.						
UNIT - II						
Jurisdiction issues in Transactional Crimes Cyber Law, International Perspective, Budapest Convention on Cybercrime. Hacking and Legal Issues, Privacy legal issues						
UNIT - III						
Cyber Law and IPR, Understanding Copyright in Information Technology, Software Copyrights Copyright in Internet & Multimedia, Software Piracy, Trademarks in Internet Domain Name registration, Domain Name disputes, Iann’s core principles and domain names, Net Neutrality, Databases in IT, Protection of databases, Position in USA, EU and India.						
UNIT - IV						
E-Commerce, UNCITRAL Model, Legal Aspects of E-Commerce, E-Taxation, E-Banking, Online Publishing and online credit card payment, Employment Contracts, Non-Disclosure Agreements.						
UNIT - V						
Information Technology Act 2000, Aims and Objectives, Overview of the Act, Jurisdiction, Electronic Governance, Electronic Evidence, Digital Signature Certificates, Digital Signatures, Duties of Subscribers, Role of Certifying Authorities, Regulations Appellate Tribunal, Internet Service Providers and their liabilities, Social Networking Sites.						
Text Books:						
1. Law Relating to Computer, Internet and E-Commerce by KamathNandan, 5 <sup>th</sup> Edition,Universal Law Publishing.

Course Code	ENTREPRENEURSHIP		L	T	P	C
21F00402b			3	0	0	3
Semester			IV			
Course Objectives:						
<ul style="list-style-type: none"><li>The aim of this course is to have a comprehensive perspective of inclusive learning, ability to learn and implement the fundamentals of Entrepreneurship.</li></ul>						
Course Outcomes:						
<ul style="list-style-type: none"><li>Learn the basics of Entrepreneurship and entrepreneurial development which will help them to provide vision for their own Start-up.</li></ul>						
UNIT - I						
Entrepreneurial Perspectives Introduction to Entrepreneurship – Evolution - Concept of Entrepreneurship - Types of Entrepreneurs - Entrepreneurial Competencies, Capacity Building for Entrepreneurs. Entrepreneurial Training Methods - Entrepreneurial Motivations - Models for Entrepreneurial Development - The process of Entrepreneurial Development						
UNIT - II						
New Venture Creation Introduction, Mobility of Entrepreneurs, Models for Opportunity Evaluation; Business plans – Purpose, Contents, Presenting Business Plan, Procedure for setting up Enterprises, Central level - Startup and State level - T Hub, Other Institutions initiatives.						
UNIT - III						
Management of MSMEs and Sick Enterprises Challenges of MSMEs, Preventing Sickness in Enterprises – Specific Management Problems; Industrial Sickness; Industrial Sickness in India – Symptoms, process and Rehabilitation of Sick Units						
UNIT - IV						
Managing Marketing and Growth of Enterprises Essential Marketing Mix of Services, Key Success Factors in Service Marketing, Cost and Pricing, Branding, New Techniques in Marketing, International Trade.						
UNIT - V						
Strategic perspectives in Entrepreneurship Strategic Growth in Entrepreneurship, The Valuation Challenge in Entrepreneurship, The Final Harvest of New Ventures, Technology, Business Incubation, India way – Entrepreneurship; Women Entrepreneurs – Strategies to develop Women Entrepreneurs, Institutions supporting Women Entrepreneurship in India.						
Text Books:						
<ol style="list-style-type: none"><li>Entrepreneurship Development and Small Business Enterprises, Poornima M.Charantimath, 2nd edition, Pearson, 2014.</li><li>Entrepreneurship, a South – Asian Perspective, D.F.Kuratko and T.V.Rao, 3rd edition, Cengage, 2012.</li><li>Entrepreneurship, Arva Kumar, 4th edition, Pearson 2015.</li></ol>

Course Code	NOSQL DATABASES		L	T	P	C
21F00402c			3	0	0	3
Semester			IV			
Course Objectives:						
<ul style="list-style-type: none"><li>Distinguish the different types of NoSQL databases. Understand the impact of the cluster on database design. State the CAP theorem and explain its main points</li></ul>						
Course Outcomes:						
<ul style="list-style-type: none"><li>Define, compare and use the four types of NoSQL Databases (Document-oriented, Key/Value Pairs, Column-oriented and Graph).</li><li>Demonstrate an understanding of the detailed architecture, define objects, load data, query data and performance tune Column-oriented NoSQL databases.</li><li>Explain the detailed architecture, define objects, load data, query data and performance tune Document-oriented NoSQL databases.</li></ul>						
UNIT – I						
Define, compare and use the four types of NoSQL Databases (Document-oriented, Key/Value Pairs, Column-oriented and Graph).						
<ul style="list-style-type: none"><li>Demonstrate an understanding of the detailed architecture, define objects, load data, query data and performance tune Column-oriented NoSQL databases.</li><li>Explain the detailed architecture, define objects, load data, query data and performance tune Document-oriented NoSQL databases.</li></ul>						
UNIT – II						
Comparison of relational databases to new NoSQL stores, MongoDB, Cassandra, HBASE, Neo4j use and deployment, Application, RDBMS approach, Challenges NoSQL approach, Key-Value and Document Data Models, Column-Family Stores, Aggregate-Oriented Databases						
UNIT – III						
Replication and sharding, MapReduce on databases. Distribution Models, Single Server, Sharding, Master-Slave Replication, Peer-to-Peer Replication, Combining Sharding and Replication.NoSQL Key/Value databases using MongoDB, Document Databases, What Is a Document Database? Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Event Logging, Content Management Systems, Blogging Platforms, Web Analytics or Real-Time Analytics, E-Commerce Applications, When Not to Use, Complex Transactions Spanning Different Operations, Queries against Varying Aggregate Structure.						
UNIT – IV						
Column- oriented NoSQL databases using Apache HBASE, Column-oriented NoSQL databases using Apache Cassandra, Architecture of HBASE, What Is a Column-Family Data Store? Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Event Logging, Content Management Systems, Blogging Platforms, Counters, Expiring Usage, When Not to Use.						
UNIT – V						
NoSQL Key/Value databases using Riak, Key-Value Databases, What Is a Key-Value Store, Key-Value Store Features, Consistency, Transactions, Query Features, Structure of Data, Scaling, Suitable Use Cases, Storing Session Information, User Profiles, Preferences, Shopping Cart Data, When Not to Use, Relationships among Data, Multioperation Transactions, Query by Data, Operations by Sets.						
Text Books:						
1.NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence Sadalage, P. &FowlerPearson Education
